

## INFORMATION LEAFLET

Please read to get the most out of your keyboard

As standard, when plugged into a USB port the CP-K8800-V2 will not illuminate in most cases, this is normal. To activate the backlit affect on the keys please **press SCROLL LOCK**.

The **SCROLL LOCK** key turns **on/off** the backlit effect and works independent of the host computer

In most cases no extra keyboard mapping is required, however for any key mapping that needs to be done within your operating system please configure as needed your keyboard preferences within your operating system, such as for a Mac
